

ANNOTATION-SYNOPSIS

I am focused on the fine motor skills of younger, especially elementary school, children in my bachelor degree work.

The theory is focused on the different possibilities of fine motorical skills, specifically using moulding materials, so often ignored in our present activities.

In practice, I pay attention to the mouldings techniques. Moulding helps children to develop fine motor skills, creativity and fantasy.

The main purpose of my work is to show how moulding materials have a positive effect on the development of fine motor skills and also an impact in many other children's activities.

Key terms: fine motorical skills, mouldal materials, technics of moulding, fantasy, creativity
