Title: Case report of physiotherapy care of patient with ruptured Achilles tendon

Summary: The aim of this bachelor thesis is introducing the reader with the topic post-operative physiotherapeutic care on a patient after ruptured Achilles tendon. The thesis includes anatomical, biomechanical and kinesiological knowledge as a foundation for treatment. I described possible operative and conservative procedures. In the special part there is formulated a case report of one patient in detail. Ten therapeutic units are described including kinesiological analysis and final evaluation. Effectivity of used methods is valorized at the end.

Key words: case report, Achilles tendon, physiotherapy, rupture
