

Bachelor study

Title	Cross-cultural comparison of school P.E. and body composition in schoolchildren in Greece and the Czech Republic					
Author	Kati Efstathia					
Reviewer	Prof. PaedDr. Ludmila Fialova, Ph.D.					
Overview						
		Poor	Below Average	Average	Good	Very good
1	The topic of this thesis is relevant, timely, and of interest to the audience				X	
2	This study is based on rigorous academic standards			X		
3	The content of this thesis is technically accurate and sound.				X	
4	The abstract is concise and sufficient			X		
5	The theoretical part provides the necessary background information				X	
6	The research methodology for the study is appropriate and applied properly		X			
8	The results of analysis are correctly interpreted and/or conclusions are sound			X		
9	References are complete and appropriate			X		
10	Tables and figures are appropriate and adequate			X		
11	The study is easy to read and free from errors				X	
General Comments						
<p>Objective and goals of bachelor thesis – comparison of P.E. teaching and coherence with the development of childhood obesity in Greece and Czech Republic – understandable and according to the title and scientific questions</p> <p>Process of treatment – student worked independently, with spirit of initiative, most of supervisor’s remarks incorporated</p> <p>Work with literature – literature sources were well selected (for both countries), citation in text has reserves</p> <p>Methodology – according to recommendation was improved the sample, used questionnaire was too surface, correlation calculations were not carry out</p> <p>Thesis contribution – show the established results, but do not answer all additional scientific questions</p>						
Strengths of manuscript						
<ul style="list-style-type: none"> - theoretical introduction of Greek and Czech educational systems of P.E. education - interesting results in compared fields by both countries (childish overweight, content and importance of P.E. ...) 						
Weakness of manuscript						
<ul style="list-style-type: none"> - size of the sample - small sized and surface questionnaire
