

## Developmental specifics of individuals with Angelman and Prader - Willi syndrome as the basis for special educator's work

The thesis deals in a complex way with the issue of two rare syndromes - Angelman and Prader- Willi syndrome.

It describes the manifestations and genetic background, outlines the options for special education and rehabilitation interventions as well as selected medical and regime measures.

The thesis informs about the category of rare diseases and also mentions the strategies for approach to these diseases used in the Czech Republic.

It also comprises a list of organizations in the Czech Republic that deal with the Angelman and Prader - Willi syndrome and which associate parents and others interested in this topic. The end, the thesis comprises casuistry of two individuals, characteristic syndrome bearers, and conclusions of a questionnaire survey among parents. Surveys through questionnaires illustrate the specific characteristics of individuals that have been used to define areas of support.

The goal of the thesis was to describe the possibilities for pedagogic and other interdisciplinary interventions, map the situation in the Czech Republic, and to provide more information about this issue to anyone interested.
