

## **Abstract**

This thesis "Speech Therapy of Children with Developmental Dysarthria" deals with dysarthria and specific therapeutic methods that can be used in the context of speech therapy for children with this specific type of communication disorder. Part of the thesis includes the complete terminological definition of dysarthria etiology, its classification, its diagnosis and a detailed treatment of therapeutic methods. This thesis also includes supplemental methods, which is important for good child developmental and positively influences child speech. The main objective is to introduce potential therapeutic methods and subsequently analyze the frequency of their use in speech therapy. This thesis can be used as inspiration for speech therapists, who will lead therapy with children who have dysarthria.
