

**Abstrakt:**

My bachelor's thesis is entitled „Analysis of the educational needs of pupils with behavioral problems“. It consists of a literary survey of the field and a research proposal following the conclusions of the theoretical part of the work. Last mentioned is divided into three parts. The first one is dealing with educational needs of students (meaning needs of all pupils). The second one defines a group of students, which we refer to as "students with behavioral problems." And the third part analyzes their educational needs. Results of mentioned parts imply the need to focus on creating a school environment, which will prevent behavioral problems of pupils. Presented research proposal deals with mapping ways of doing that.
