

## ABSTRACT

The purpose of my research was to determine the level of motor skills and school readiness in preschool and primary school children. The thesis consists of theoretical and practical part. Theoretical part deals with development of motor skills, school maturity and characteristics of preschool and primary school period. Practical part includes the results of testing fine motor skills and rough motor ability using the assesment of the test of the school readiness. The results for children of different age were mutually compared and then compared with professional literature.

**Key words:** Motor skills, motor development, school readiness
