

Abstract:

Competition of seeds and seedlings is being reviewed in this bachelor thesis, namely relationship between competition with different timing of germination and different seed mass. The question is when and why timing of germination is changed. There is a lot of factors creating very big variation in results. Main factor is presence of other plants in same site. Also a lot of abiotic factors take very important part. Because of this variability we can not pronounce clear answer.

Key words: germination, competition, seed mass, timing of germination, seed, seedling
