

Abstract

- TitleTitle:** Comparative analysis of the avalanche situation in the Czech part of the Giant Mountains in the years 2009 – 2013
- Objectives:** The objective of this Bachelor thesis is to analyze the avalanche situation in the period 2009 – 2013 and its comparison with theoretical assumptions of the avalanche's origins in the Czech part of the Giant Mountains.
- Methods:** The method that was used in this Bachelor thesis was a Comparative analysis, that combines analysis of the source materials and their subsequent comparison with available theoretical assumptions.
- Results:** The result of this thesis is the finding that snowslides on the Czech part of the Giant Mountains correspond to the theoretical assumptions of avalanche's origins.
- Keywords:** avalanches, Giant Mountains, Comparative analysis, avalanche situation, weather
