

Abstract:

The Bachelor graduation work deals with possibilities for the development of creativity of pupils in educational process within preliminary and primary education. It is split into two sections: the theoretical part and the empirical one. The theoretical part deals mainly with the explanation of terminology, phenomena, and also hit her to performed empirical research and studies focusing on the area of the substantial matters and prerequisites for general development of creativity with people as well as the creativity development within the educational processes. The empirical part includes mainly my own qualitative research using semi-structured interviews with teachers, and also my open participating survey within the educational processes at schools.

Keywords:

Creativity, teachers, pupils, educational process, methods of developing creativity
