

Abstract

The publication serves for information about drilling in geology, it describes historical context of drilling in the distant past and its purpose but also the reader is introduced with the complex logic of drilling and knowledge of drilling techniques. Simultaneously this publication describes borehole together with all works which must be done before bigger projects of drilling begins. Because the publication isn't only about drilling technique and technology so basic informations about ground investigation methods are in this publication too.

Key words: borehole, drill rig, drill bit, core, ground investigation
