

## **Abstract**

The Influence of Railways on Residential Suburbanization in the hinterland of Prague: the example of Černošice

The target of the diploma thesis is to explain the long term influence of railway on the feature and development of residential suburbanization within the hinterland of Prague. The influence was assessed on the set of information found in the literature and 3 main factors which the thesis deal with. The first factor is the influence of railway on the development of population in relation to residential suburbanization. The second factor is the verification of the existence of railway suburb in the hinterland of Prague in the case of Černošice. The third factor is the influence of railway on the decision making of chosen mode of transport used for commuting. Qualitative and quantitative data were used in the thesis. Statistical data analysis was used as well as the information found in the archives.

**Keywords:** railway, residential suburbanization, Černošice, the hinterland of Prague
