

The thesis describes the steps of the project "The Klostermann Pre-school Garden" in Děčín VI, the goal of which was to change a garden with unsatisfactory play elements to a garden in a natural style. The thesis constitutes of three parts: theoretical, executive and practical.

The theoretical part explains the goals, methods and means of environmental education and it describes environmental education in the context of The Early Years Framework Educational Programme and the exploitability of the natural style garden.

The executive part introduces the project and the changing of the pre-school garden.

The practical part describes the educational projects that are applicable for keeping cattle and domestic animals and the usability of the play elements for early years children education.
