

## **Abstract**

Environmental Impact Assessment is one of internationally recognised tools providing environmental protection. Purpose of the assessment is to identify and comprehensively evaluate environmental impact of a project with participation of the public, professionals and administrative bodies, prior to the realisation of the project. Information gained through this process is then used as a basis for decision making in procedures granting development or other consents.

The thesis aims to analyse in particular the Czech environmental impact assessment law with emphasis on its recent amendment and reasons of its implementation.
