

## **ABSTRACT**

The diploma thesis looks at the Rey-Osterrieth figure, its form, administration and its evaluation methods. The thesis describes the administration and test evaluation methods in single Czech manual made by M. Košč and J. Novák and also other used ways of scoring. The thesis attempt to present J.E. Meyers and K. R. Meyers scoring method that is also used by some Czech psychologists. The thesis deals with psychometric attributes of the test as well with emphasis on current available testing standards. One part of the thesis describes the development of some psychological functions by 12 years old children especially in relationship to abilities which are detected by Rey-Osterrieth figure.

In practical part of the thesis is presented the main research which deals with procedure of making the test by twelve year old. The tests were evaluated by both mentioned methods with interpretation and analysis of its results. The thesis also looks at new preliminary standards for this age group. The test was also compared with individual results made by Číselný čtverec test.
