

## **Abstract (angl.)**

The diploma thesis covers placing public orders, which represent a large amount of expenses of the public sector – approximately 14% GDP in the Czech Republic. In detail, it focuses on the area of ICT, which is often mentioned in context with overpriced orders. The goal of the thesis is to analyze processes of placing orders in public sector via comparison and qualitative interviews with adequate respondents. Based on the outcomes of the analysis, there are proposed possible new system solutions. The work also deals with applicability of the Agency theory in this particular area.
