

The goal of this thesis was to create an educational application for children in elementary schools which is easy to use both for children and teachers. Nowadays there are lots of similar applications, but most of them support only the English language. Our target users are primarily Czech students. The main advantage of the application is that it does not focus on a single subject. It includes modules in which one we can practice maths, grammar, writing or music education. The most important feature of the application is its extendability, which includes adding modules and examples at the user level. The thesis consists of two applications. The main application has an educational character. The second application manages the database on the FTP server.
