

## ABSTRACT

This bachelor Theses examines the impact of primary prevention programs, which are implemented in primary schools in town of Litoměřice. Bachelor Theses tries to find out the effectiveness and usefulness of these programs during the lessons in primary schools.

Theoretical part of the work focuses on definition basic terms and the development of primary prevention of risk behaviours. Also discuss the importance of preventive work and programs of primary prevention of their content and objectives. The work describes the external primary prevention programs which are established and implemented by Educational and Psychological Counselling in town of Litoměřice. And also programs which are implemented by Town of Litoměřice in cooperation with the local police and discusses cutting width of these programs.

The empirical part of the work focuses on evaluation of data collected through research among primary school pupils in town of Litoměřice. Research was conducted in the external primary prevention program which named "Safe on the Internet". This program was implemented by Educational and Psychological Counselling in town of Litoměřice. My own investigation was carried in two phases. First phase was before the start of primary prevention programs. Second phase was after finishing primary prevention program, in four classes at two primary schools.

In conclusion, I summarize the results of their research and conclusion drawn from the research.
