

ABSTRACT

TITLE:

Climbing walls on Basic and Secondary school in South Bohemia.

OBJECTIVES:

The aim of this thesis was to determine the number of elementary and secondary schools in South Bohemia, they're using wall climbing in physical education lesson. How many schools owns a climbing wall and what's they're material equipment.

METHODS:

This thesis is made up as a research with email communication and survey with questionnaire. First of all it was made the survey with email communication to determine, which schools are using wall climbing in physical education lesson. Then to this schools was sent the questionnaire with fourteen questions about the wall, lessons and material equipment. The data were processed in statistical program Excel and presented with the help of created graphs.

RESULTS:

This work shows actual state of using wall climbing in elementary and secondary schools. In South Bohemia makes this 16 schools of the total number of 378, witch represents less than 5%. Further it was investigated the method of inclusion this activity straight in to the physical education lessons and material equipment that each of this school owns.
