

Abstract

This diploma thesis is dealing with a natural disaster from the human perspective. The thesis is particularly focused on the sense of threat and migration due to flooding which hit Chrastava in Liberec region in 2010. The aim of this thesis is to determine whether sense of threat and reasoning migrate depends on gender, age and distance from a river. The research is based on quantitative and qualitative research methods. Based on the research it could be said that the sense of threat and migration do not depend on the above selected factors.

Key words: floods, sense of threat, environmental migration, gender, age, distance from a river
