

## **ABSTRACT**

This thesis named *How can be sibling constellations by health disability affected*, researches the effect of health disability on sibling constellations. The influence of health disability is examined in the area of career orientation, spending freetime and position of intact sibling in sibling constellation. Data gained from semistructured interviews are sorted by contained informations and contexts to these three categories.

The objective of this thesis is to find out whether sibling constellations are indeed the fixed areas affected by health disability. The data and codes are obtained by summary in interviews according to required categories. These data are compared with theoretical basis and then they are formed to answers to research questions.

The conclusions of research established that in investigated areas sibling constellations are influenced. The influence comes from the individual dispositions of each of the respondent.

At the end of the thesis based on the survey results there are proposed additional procedures for the processing of related research. The idea of the thesis is to express and give support for persons similar life situations.
