

## **ABSTRACT**

The thesis titled *Evaluation design therapy of neurogenic disorders of language in clinical speech therapy* aims to find out what effect the speech reeducation to improve communication skills in people with acquired neurogenic communication disorders speech. Next, determine whether therapy plays a role during client environment, if the success rate of therapy affected patient's condition and the extent to which the clients are motivated to therapy.

The theoretical part summarizes the findings from the literature on neurogenic communication disorders, aphasia and dysarthria. Each chapter is devoted to the terminological definition and definition, etiology, symptoms (for aphasia), classification, diagnostics and therapy.

The practical part deals with the research survey. There are set targets mentioned methodology, research sample characteristics and place of the investigation. Following processing of four case studies. Which describes the therapy sessions and individual work with clients.

## **KEYWORDS**

Neurogenic speech disorders, aphasia, dysarthria, logopedic therapy
