

Abstract

Title: In line tracks in Prague and their attendance

Objectives: The aim of work is description and characteristics of selected tracks for in line skating in Prague and assessment of their attendance.

Methods: We used the questionnaire survey to collect data. We received the answers from the respondents on the basis of a controlled interview. The results we statistically processed using absolute and relative frequencies. We also used the observation method to describe in line tracks.

Results: The infrastructure of in line tracks in Prague is already well built and for skaters offer a wide selection to choose from, but there is still some space for improvement. The main focus should be on the surface quality and width, service for skaters and on some track also on length. Through the questionnaire survey it was found that in line trails are mostly attended working populations aged 26 - 35 years and the main reason why they skate is spend leisure time or improve their fitness.

Key words: in line skating, sport for all, in line tracks, outdoor activities
