

ABSTRACT

The diploma thesis is focused on evaluation of changes in the functional use of banks of Water reservoir Slapy. It is done on the basis of study of professional literature and resources, map data and own survey. Water reservoir Slapy holds many functions, such as energetic or flow control. The main purpose of the banks is in tourism and recreation. In the thesis is emphasized the recreational function which changes are analyzed in four periods. The other analyzed functions are economic, service, transport and residential functions. Part of the thesis is also analysis of managed interviews with mayors of municipalities and representatives of recreational facilities. The thesis contributes, as a survey of changes in the landscape of the area of interest, to understanding the area of Central Vltava.
