

Abstrakt:

The bachelor thesis focuses on the phenomenon of ADHD which is in our society with ever increasing intensity and frequency. It focuses on terminology connected with this phenomenon and on the factors that trigger ADHD (genetic and nongenetic, with focus on describing basic knowledge about possible causes of this disorder) and also on protective factor – how can we work with children with ADHD and how we can influence and moderate behaviour connected with this disorders.

The empirical part focuses on the design of a research project that would be interested in a sample of younger school children. Within several interviews, facilitating and protective factors of ADHD (that could lead to improving care of children with ADHD), should be discussed and found.

Keywords:

ADHD, ADD, hyperactivity, pedagogical psychology
