

This diploma work would like to provide basic information concerning pregnancy of woman with hearing disabilities.

The first chapters of work are attempted to divide and to describe basic types of auditory handicaps. The following part of this work deals with description and usage communication forms between doctor and patient with hearing disabilities.

The following parts are confiised on information about pregnancy of woman, during childbirth and post-action care about new-born child. All these chapters of work like to try to point out the problems, what can occur in communication between pregnant woman and the doctors.

The close of this diploma work is evaluation of my answer sheet. I tried to ascertain facts about communication problems of mothers during the pregnancy and informed ness of deaf mothers.
