

ABSTRACT

This diploma thesis deals with a children's musical creativity development at primary school with the Step-by-step program. The thesis introduces an overview of the current topics in alternative education, reveals main ideas of the Step by step program and describes a creativity in general with focus on the area of musical creativity and its development. The main goal of this thesis was to analyze usage of activities stimulating musical creativity development in normal classes at primary school and compare the results with the classes where the Step by step program is in use.
