

The goal of the diploma thesis is to arrange a plan for sexual education at the school for visually impaired children. The work on the diploma thesis is grounded with the experience of primary prevention programs, experienced working with visually impaired people and with the skilled literature. In the first part, the development of sexual interests in the childhood is compared to the specific development of the one with visual impairment. Afterwards the influence of the eye defect to the visually impaired person is described. The next section is given to the approach to the sexual education through the social learning conception of visually impaired and through setting concern topics of the general educational programme together. Based on the methodological principles for the sexual education, the model of sexual education hour in different class groups with its analysis is presented. After that the subjective sight of visually impaired people on the sexual education problematic is shown by the short questionnaire assessment. Theoretical – practical knowledges are used to arrange blocks of different kind of topics for the school lesson filled with sexual education. The plan counts with more than one block per year and per school attendance to realize all topics. The emphasis is also put on the teacher's motivation and his essential position in the group of visually impaired students.
