Rehabilitation of infraclavicular brachial plexus injury and proximal humeral fracture after surgical repair.

Goal of thesis:

Case Study of Physiotherapy Treatment of a Patient with brachial plexus injury nad proximal humeral fracture after surgical repair. The initial section presents a related theoretical framwork and intention of the postoperative rehabilitation program. The final section is a single-subject case study including initial and final exam, therapy and evaluation.

1. Volume:

* pages of text	86
* literature	46
* tables, graphs, appendices	22 tables, 3 figures, 10 appendices

2. Seriousness of topics:

	above average	average	under avarage
* theroretical knowledges	x		
* input data and their processing	x		
* used methods		x	

3. Criteria of thesis classification

	evaluation			
	excellent	very good	satisfactory	unsatisfactory
degree of aim of work fulfilment	x			
depth of analysis of thesis		x		
logical construction of work	x			
work with literature and citations				X
adequacy of used methods		X		
design of work (text, graphs, tablels)		X		
stylistic level	X			

4. Usefulness of the thesis outcomes:

~~under average~~	average	

5. Comments and questions to answer:

What I am missing in this thesis i check up the distal parts of upper extremity.(Pasive and active movement of fingers and also musle strength of distal part).If there is periferal paresis why didi you used metod nurse Kenny just for m.bices brachii?Would you use it also for another muscles?

6. Recomendation for defence:

YES	~~NO~~

7. Designed classificatory degree

excelet to very good

according defence
