

Major task of this diploma work was creation of screening test covering different functions of visual perception. The proposed test is suitable for individual use at specialized centers as well as group administration at kinder gardens.

Theoretical part presents major topics of this diploma work such as visual perception and its relation to possible development of specific learning disabilities, dyslexia and existing standard tests of visual perception.

Practical part introduces proposed test, results of its trial administration, confrontation with standard test as well as the evaluation of its validity. It also presents case studies of tested children with suspicious test results who were tested repeatedly at basic school.
